New Jerico Sustainable Line Holds Promise for Post-Consumer Waste

Wadsworth, OH, USA - Jerico Plastic Industries, Inc. announces the launch of its full line of sustainable polymer compounds under the banner of J-Sustain. The line consists of several compounded products that aid in promoting sustainable polymer compounds, clean waterways, and the recyclability of post-consumer waste in rotational molding.

Products are fully-formulated PE compounds for optimal processing and are ready to use in most applications. Products range in concentration of post-consumer recycled waste, with options available in 10%, 25%, and 40%. The recovered PE plastics have been collected and recycled to help prevent the plastic from reaching oceans and waterways that empty into the seas. Jerico Plastic Industries has a long history in post-industrial recycling and development of a wide range of formulations that can incorporate plant-based PEs.

These blends provide a good balance of performance and physical properties with good impact performance. Data to support these findings is available along with Technical Data Sheets.

“We have offered a number of these products, such as Envirolene, for some time now. Our product engineers have continued to develop formulations and combinations that fill the growing worldwide need for a “greener” compound that helps our planet,” states Brandi Frey, Corporate Operations Officer

With manufacturing facilities in Minerva, Ohio and Greensboro, Georgia, Jerico Plastic Industries, Inc. is committed to excellence in rotational molding and custom compounding. As a custom manufacturer of color compounds, specialty resins and recycled products, the company currently offers rotational molding PP, sustainable polymer compounds, cross-linkable PE, flame retardant PE and special effects PE compounds, PU to PE adhesion compounds, custom compound development, toll post-industrial recycling services for rotational molding, toll pulverizing, and compounding services.
